Professional Experience Summary

Paul Enwerem is a seasoned and highly proficient Full Stack JavaScript Software Developer, specializing in the renowned MERN (MongoDB, Express, ReactJS, NodeJS) stack. With a track record of around 5 years, Paul has consistently exhibited excellence in his field. His unwavering commitment to remaining at the forefront of web development trends sets him apart.

Paul is renowned for his ability to deliver top-tier software solutions, ensuring every project is characterized by unwavering quality. His collaborative spirit shines through as he seamlessly works with cross-functional teams and clients, effectively transforming ideas into scalable and robust websites and web applications.

Paul boasts certifications in HTML, CSS, and JavaScript from New Horizons Nigeria, showcasing his dedication to mastering the core technologies of his craft. His proficiency extends to crafting responsive designs, enabling seamless user experiences across various devices.

In his impressive career, Paul has developed a diverse portfolio of projects that include eCommerce websites, Investment research tools web applications, Chat applications, Business landing pages, and more. His multifaceted skill set seamlessly combines technical prowess with creative problem-solving, making him a sought-after professional in the field. Elevate your web development endeavors with his expertise and experience.

Technical Skills

HTML5 and CSS 3	JavaScript	JQuery
Node JS	MongoDB	React JS
Express JS	Redux	Vue JS
REST API	GIT	C#
Agile Framework & JIRA	Heroku	Jenkins & SonarQube
Unit Testing (JEST)	GitHub	JSON Web Tokens (JWT)
WCAG 2.0 Accessibility	Bitbucket	Amazon Web Services (AWS) etc.

Work Experience

Software Developer   **October 2021 - Present**
Developing and Maintaining Client's Applications   **Global Economy**
S&P Global

This initiative focuses on developing and maintaining applications for different clients, working to enhance customer interactions, implementing adequate solutions to bugs, and creating outstanding new Features.

- Work with a team of 14 members in Agile environment, building and maintaining primarily Schwab.com web application that provides investment, banking, and financial services.
- Write code in mainly C#, Vue JS, and Node JS and Write Jest unit tests with a coverage of 90%+
- Regular production support to investigate and fix Live bugs on the clients' production environment.
- Work with WCAG standards to make websites and web applications more accessible to people with disabilities, increasing accessibility from below 20% to 90% using WCAG 2.0 recommendations.
- Build new features like Stock and ETF Charts, Funds Compare tools, financial planning tools and calculators etc.

Software Developer   **May 2020 - October 2021**
Company's Website creation   **Immigration**
Davito Immigration Service

This initiative centered on building and hosting the company's website from scratch to showcase different services, certification and ensure easy user interaction to initiate the process on immigrating to Canada.

- Lead a team of 5 that included Developers, UI/UX designer, QA tester and Project Manager
- Facilitated coding infrastructure and made sure my teammates submitted clean, clear, and effective lines of code.
- Followed strict designs patterns of the UI/UX designer in Figma to ensure my team's output is in line with the Company's requirements.
- Coded mainly with MERN (Mongodb, Express JS, Node JS, and React JS) stack.
- Single handedly handled the deployment of the team's output/finished work using Heroku and GoDaddy for deployment and then making sure the site is secure by installing an SSL certificate,
- Version control using GIT to maintain and merge the lines of code and ensure synchronicity amongst my team.

Fullstack Developer   **November 2019 - May 2020**
E-commerce Web Application   **Retail**
Nada Create

This initiative centered on showcasing, ordering, saving, and delivering merchandise which mostly consists of Soccer Jerseys for numerous soccer clubs.

- Wrote well-designed, testable, efficient code using Node JS, React JS and Express for company e-commerce web application.
- Responsible for implementation of MongoDB to store company products and user information also Dynamically rendered data from a MongoDB database.
- Used Passport JS to create and authenticate users for the e-commerce application.
- Worked with Paystack API to integrate payments for each product ordered.
- Meticulously adhered to the Figma UI/UX design to ensure compliance with client's requirements.

Web Developer   **December 2018 - March 2019**
Company's Website creation   **Small Business**
Kreer NG

This initiative was my first opportunity as a developer, it focused on building the company's website.

- Developed and designed front-end of the web application to showcase products and services.
- Delivered responsive, cross-browser compatible and accessible website by writing code in HTML, CSS, and vanilla JavaScript.
- Produced visual elements of web applications by translating UI/UX design wireframes into code.
- Designed and implemented a picture gallery feature.
- Worked directly with clients to develop technical solutions for business cases and needs.
